Density, Concentration and Solids Content

Non-contacting measurement
Non-contacting measurement technology made by Berthold

Berthold density measurement systems are used for the continuous process control on pipelines and in vessels. Density, concentration and solids content are determined in a non-contacting manner, without affecting the flow properties of the measured material.

Successful applications can be found in a wide range of industries and in particular when facing extreme measurement conditions:
- Extreme temperatures
- High pressure
- Dust
- Corrosive or abrasive media

The measurement can be performed on liquids and mixtures of any type, including acids, bases, solutions, emulsions and suspensions. The bulk density of solid matters such as granulates or powders can also be determined.

Measuring principle and function

Gamma radiation is attenuated as it passes through a pipeline. This attenuation is measured by a detector. The extent to which the radiation is attenuated is dependent on the density of the medium in the pipeline. The higher the density, the less radiation reaches the detector. In this way, density, concentration and solids content can be determined reliably in a non-contacting manner – regardless of pressure, temperature, viscosity, conductivity and chemical properties.

Measuring principle and function

This results in the high reliability and low maintenance requirements of the radiometric measuring systems, even under severe operating and environmental conditions.
Measuring configuration

Flexible adjustment to measurement geometry and task
Using different detectors and sources enables us to offer customized solutions that perfectly meet your requirements. Detectors and sources can be combined in various ways and may also be inserted in dip pipes.

Regardless of the measuring configuration and component aging, all systems can compensate for fluctuating temperatures, which guarantees the highest level of accuracy.

Which of the options shown on the right is selected depends on the:
- Measurement geometry
- Accuracy requirements
- Economic aspects

Our experienced sales and application engineers will support you in finding the optimum system configuration.

90° irradiation
- Standard solution
- Ideal for large pipe diameters and major density fluctuations
- Easy installation due to preassembled mounting device
- Lowest activities possible

30° or 45° oblique irradiation
- Highest accuracy for small measuring ranges
- Easy installation due to preassembled mounting device

S- or U-shaped measuring path
- For the smallest pipe diameters
- For the slightest changes in density
- Optimal adjustment of the measuring path to the measurement task

Vessel measurement
- Transmission measurement with source in dip pipe (a) or backscatter measurement (b)
- Measurement of density profiles
- Optimal adjustment to the measurement task possible
Technologically always one step ahead!

**Highest sensitivity**
Berthold detectors are particularly sensitive to Gamma radiation. The advantages:
- Increased measurement accuracy and faster response times
- Significantly lower source activity
- Longer service life
- Use of smaller shieldings resulting in lower acquisition and transportation costs for source and shielding
- Low dose rate – less than 1 µSv/h

**Unparalleled long-term stability**
A measurement that is stable and reliable over many years is an important quality criterion for the selection of radiometric systems. Accordingly, considerable effort was put into the development and optimization of this detector property. Today, we can proudly say that Berthold detectors provide the best long-term stability.

A patented procedure for automatic drift compensation compensates for temperature influence and ensures a high sensitivity and consistent measuring accuracy over the entire lifetime of the system and years of operation without the need for recalibration.

The stability of the CrystalSENS is ≤0.002 % per °C, tested over a temperature range of −40 ... +60 °C.
System Overview

Specialists in radiometric density measurements, Berthold supplies a broad range of system families. They differ in scope of service and range of price. Berthold is able to adapt their product range perfectly to the most varied of applications and requirements. This brochure provides information on each system family.

**DuoSeries LB 474**
- Genuine 2-wire system
- Separate evaluation unit
- Intrinsically safe power supply
- Continuous water cooling for the entire detector (can also be retrofitted)

**SENSseries LB 480**
- Compact field device
- SIL2 and SIL3
- HART interface
- Separate terminal compartment (Ex-e)

**UniProbe LB 491**
- Compact field device
- HART, Profibus and Fieldbus Foundation
- Extra: Mass flow measurement (e.g. in t/h)

**SmartSeries LB 414**
- Compact field device
- Local interface (display and operation)
- Perfect for density measurements in nonhazardous areas
- Impressively simple
DuoSeries LB 474
Proven 2-wire technology with leading-edge functions

Using proven 2-wire technology

- Unique: Radiometric density measurement with intrinsically safe power supply (full Ex-i)
- Ideal for all standard applications, but also for tricky measuring tasks
- Easy, intuitive operation via touch-screen
- Important maintenance-oriented diagnostic functions and self-monitoring
- Compatible with the previous model
- All contemporary Ex-approvals
- Mass Flow evaluation

Monitored current output ensures maximum reliability

3.5” TFT simple touch-panel operation.

Only 2-wires in the field

Safe, reliable operation by Dual Core CPU

Temperature Compensation

For 4 different products

Diagnostics according to Namur NE-107 with event log, change log and data log

Service interface via Ethernet or USB

Lead collimator provides protection from background radiation and ensures high reliability and measurement accuracy

Stainless steel housing

Continuous water cooling for the entire detector (can also be retrofitted)

Terminal compartment (Ex-e)
Simple and straightforward in operation

The LB 474 evaluation unit has a 3.5” large TFT touch panel for easy operation directly on the device. In addition, an USB keyboard or mouse can be installed.

The transmitter also provides an Ethernet interface for remote access.

Robust wall housing (IP65)

LB 379 Measuring unit for special applications

Due to the use of the low-energy isotope Am-241 or Cm-244, the LB 379 is able to detect elements depending on their atomic number. This way, the concentration can be determined even if the density of the mixture changes only slightly or not at all.

Application examples: %HCl, %H₂SO₄, and %Zn in aqueous solution.
SENSseries LB 480
The best choice for highest demands

- Compact field device with integrated evaluation unit
- SIL 2, with homogeneous redundancy SIL 3, for high and low level alarm and continuous density measurement
- Process connection via HART
- Quick Start menu for effective and fast start-up
- Daily functional check and continuous self-monitoring
- High interference immunity (SIL standard)

Monitoring of detector temperature with adjustable max./min. threshold for cooling control

Current output active or passive

Monitored current output

CPU monitoring through watchdog timer

Terminal compartment offering increased safety, easy and safe connection in the field for all four wires

Excellent IP protection: IP65, 66, 67, 68, 69K

Extremely robust design

Continuous water cooling for the entire detector (can also be retrofitted)

Stainless steel housing in 304 or 316L

High durability confirmed in various temperature, shock and vibration tests.
SENSseries LB 480 for critical processes

The SENSseries LB 480 measuring system is especially suited for challenging applications. This is the first radiometric density measuring system to be certified according to SIL2 and SIL3 and features a variety of maintenance-oriented diagnostic functions. For example, the measurement stability is continuously monitored by using the cosmic radiation as a reference measurement. Combined with the unparalleled long-term stability, the SENSseries LB 480 offers the highest level of occupational safety and process reliability. This detector is therefore the best choice especially in safety-critical processes, including oil platforms.

SpeedStar

SpeedStar is used when the speed of the measurement is a crucial issue. Due to the extremely short response time of 50ms, rapid changes such as slugs are detected early, before they reach the production processes downstream.

Quick Start – for a fast and easy start-up

The user-friendly Quick Start menu guides you to an effective start-up in only a few steps. Once the most important measurement parameters (isotope and one calibration point) have been entered, the measurement is available within a very short time. Special functions and supplementary parameters can be added later, if required.
Uni-Probe LB 491
A universal field device for a variety of applications

A versatile compact device

- Versatile detector for various applications
- Compact field device with integrated transmitter
- Communication via HART, Foundation Fieldbus or Profibus PA
- Communication can be switched from Bus to HART at any time
- Solid system for standard applications
- Can also be used for mass flow measurements

RRobust compact device for high demands

The Uni-Probe LB 491 density measurement system is a proven compact device fitted with a robust stainless steel housing. It is inexpensive, reliable, precise and requires very little source activity. It features all common communication possibilities such as HART, Profibus PA and Foundation Fieldbus.
Monitored current output

A monitored current output provides you with a high level of safety. It ensures that the correct measured values are displayed. The device constantly compares the actual flowing current with the target value. A failure current is generated if any deviations are detected. A watchdog timer monitors the functionality of the CPU at the same time.

Mass flow

In combination with a flow rate measurement, the Uni-Probe LB 491 can also be used to determine the mass flow rate (t/h). The flow rate signal is directly transferred to the Uni-Probe as a 4-20 mA current signal before being internally offset against the density. The result is a reliable and precise mass flow measurement that combines all the benefits of the non-contacting measurement technology.

**LB 491**

**Detector operating data**

| Power supply | 100 ... 240 VAC, ±10 %, 50 ... 60 Hz, 15 VA  |
| Cable connections | 4-cable entries 3/4 inch NPT, closed with blind plug  |
| Maximum cable length | 3300 m (1200 ft), 1600 m (5000 ft)  |
| Wire cross-section | 0.5 ... 1.5 mm²  |
| Housing material | Stainless steel ISO 1.4301 / AISI 304  |
| Water cooling | Option, max. 6 bar  |
| Cascading | Up to 8 detectors  |

**Detector certificates & tests**

- **IP protection**: IP65 / IP66 + Nema 4X
- **Explosion protection**: ATEX / IECEx: II 2 GD EEx d IIB T5 IP66 T80 °C, II 2 GD EEx d IIC T6 IP66 T80 °C
- **US/Canada**
  - Class I Division 1 Group A, B, C, D
  - Class II Division 1, Group E, F, G
- **Other certificates**: Nepsi, IECEx, Kosha, CCOE, others upon request

**Signal inputs and outputs**

- **Signal output**: HART 4 ... 20 mA potential-free, active or passive
  - Max. Impedance: 500 Ω (active)
  - Voltage supply: 12 V ... 24 V (passive)
  - Max. Impedance at 12 V: 250 Ω (passive), 24 V: 500 Ω (passive)
  - Option: intrinsically safe HART current output 4 ... 20 mA, potential-free, passive
  - Voltage supply: 12 ... 30 V, voltage drop <3.5 V, 20 m signal cable (blue), pre-assembled
  - Exi II: L=14.78 mH; C=679 nF / Exi IIC: L=2.18 mH; C=84 nF
- **Bus output**
  - Option: Bus interface: Profinet PA or Foundation Fieldbus
  - Bus powered, typical 13 mA with 2xAI function blocks
  - Option: intrinsically safe Bus interface, 20 m signal cable (blue), pre-assembled
  - Approval according to ATEX and FISCO
- **Digital inputs**: Dig In 1: Hold input, Dig In 2: Empty adjustment
- **Analog input**: Pt100 for temperature compensation
- **Digital outputs**: 1 relay (SPDT) for collective fault message
  - 3 relays (SPDT) alternatively for: Hold signal, min. / max. alarm, detector temperature, radiation interference detection
  - Permissible load at ohmic load: max. 5 A bei 250 VAC or 30 VDC
- **Interfaces**: RS 232 for software update
- **Data backup**: in non-volatile memory

**Features**

- For HART, Foundation Fieldbus and Profibus
- X-ray interference protection (XIP)
- Event log
- Continuously monitored current output
SmartSeries LB 414
Smart detector for non-hazardous areas

**Simply smart!**
- Compact field device with integrated transmitter
- Perfect for density measurements in non-hazardous areas
- Simple and straightforward local display operation
- Process connection via 4-20mA/HART
- No recalibration required
- Impressively simple

- Self-diagnosis according to Namur standard NE 107
- Display and control panel on the detector
- Robust design with stainless steel housing
- Guided Quick Start menu
- Modem for PC connection
- Polymer lid with window or stainless steel lid for extremely hot working environments
- Status LED according to NE 107
- Process connection via 475 HART Communicator, Simatic PDM or AMS/DeltaV
A smart solution for standard tasks

The SmartSeries detectors are the smart solution for density and concentration measurements in non-hazardous areas. Hard and robust – proven by stress tests carried out by the Fraunhofer Institute – this detector is suitable for the toughest work environments, such as in mining, cement production and in the paper industry.

Integrated evaluation and control unit

The system can be operated either through the HART interface or via the device’s user interface. All parameters can be entered directly via the local user interface. The operation is simple and intuitive and is effected either via the control elements on the device itself or with the aid of an infrared remote control. Of course, all settings can be performed via a PC. This PC is simply connected through our detector service modem.

Tough performers noted for their precision

**CrystalSENS**

Small, compact scintillation detector with particularly high sensitivity and stability despite its small size. Available in various scintillator materials, sodium iodide or polymer, as well as various scintillator sizes. This diversity allows for optimal adjustment of the detector properties to the measurement task, especially in terms of sensitivity, speed, mechanical stability, etc.

**SuperSENS**

Point detector with extraordinarily high sensitivity and measuring accuracy. Ideally suited for applications that in the past required very high source activities. Perfect for thick-walled pipes and vessels or for large vessel diameters. The extremely large scintillation volume is many times greater than that of conventional detectors resulting in a threefold to fourfold increase of the sensitivity. By using the SuperSENS, the service life of existing sources can be extended for several years.

**Inline density meter LB 379**

The measuring unit LB 379 combines the radioactive source and the detector in one unit. Its compelling advantage is the use of low-energy isotopes such as Am-241. The LB 379 provides the best accuracy for measurements that involve only minor changes in density.

Due to the low energy (comparable to that of X-rays), the measuring unit can be operated on a licence-free basis in several countries. The system is flanged to the pipeline and is completely made of stainless steel.
Application examples

**Solids content measurement in the thickener**

**Mining**

Large volume thickening tanks are used in mining to concentrate the ore or minerals contained in sludge. Solids settle on the bottom of the thickener and from there they will be removed from the vessel via an underflow outlet. The sludge leaving the thickener should have a fairly high solids content. However, pumps and pipes can become clogged if too many solids are withdrawn at once.

**Solution: Solids content measurement with SmartSeries LB 414**

The solids content in the underflow is monitored continuously by the radiometric density measurement SmartSeries LB 414. The robust stainless steel device provides reliable measurements with excellent accuracy and reproducibility over many years. The integrated control panel allows for easy and quick start-up. Measured values are displayed on-site.

**Multiphase level measurement in the separator**

**Oil and gas production**

Due to the density difference, different product layers form in the separator – from bottom to top: Sand, water, emulsion, oil, foam and gas. The density profile is measured via the height of the separator to determine the thickness of the individual product layers.

**Solution: Density measurement with SENSseries LB 480**

Several density detectors are installed outside the vessel to determine the density distribution over the entire measurement range. The detectors are approved in accordance with SIL2 or SIL3 and operate very stable and safe over the entire operating time. Due to the precise mapping of the separation process, the addition of emulsion breakers can be optimized. In addition, the separation of oil and gas is optimized.
Berthold Technologies is a company rich in tradition and the only provider of radiometric measurement technology worldwide with an in-house source production. This opens up unique opportunities for our customers. The sources are manufactured to customer specifications and can be adapted perfectly to the respective application requirements. Our standard range includes:

- Point and rod sources
- Dip pipe sources for installation in a vessel
- Various isotopes such as Cs-137, Am-241, Co-60 or Cm-244
- Various, often customized shieldings, from materials such as lead, tungsten or stainless steel

This diversity enables us to always choose isotopes and shieldings that represent the most cost-efficient solution for the respective application while ensuring the best measurement result at minimum radiation exposure. We will be happy to design special solutions for your special applications. Please contact us.

Maximum safety
The SSC source capsules made by Berthold have been tested according to ISO 2919 and exceed even the highest classification C66646. They are extremely robust and withstand temperatures up to 1200°C. The triple encapsulation of the isotope ensures maximum safety even in extreme measurement environments.

</tbody>
</table>

Tailor-made – the best solution for your needs
Sources and shieldings are individually designed by our project engineers for each application. The measurement is designed in such a way that only the source activity that is actually needed will be used and, at the same time, a long service life of the source is guaranteed. For example, Co-60 can be used for more than 10 years without having to replace the source. Thanks to the high sensitivity of our detectors, the source activity in Berthold systems is significantly lower than that of other systems available on the market. A dose rate of less than 1 µSv/h is typically sufficient to perform reliable density measurements.

**Competence in radiation protection**

Every company working with radiometric measurements is automatically faced with the issue of radiation protection. Therefore, it is good to have a team of in-house experts on this matter. Our experts in the Radiation Protection division deal with the tasks related to dose rate measurement. The transfer of knowledge is direct and synergies are to your benefit. We at Berthold take special responsibility when it comes to training our customers. We offer training and workshops for Radiation Safety Officers.

- **Project-specific calculation of the source activity according to the ALARA principle**
- **Use of various isotopes: Cs-137, Am-241, Co-60, Cm-244**
- **Use of various shielding materials such as lead, tungsten or stainless steel**
- **Small in size and with best shielding effect**
- **Various options available**
- **Maximum safety due to the use of extremely temperature and corrosion resistant source capsules**
- **In-house production facility for sources allows customer-specific manufacturing and individual designs**
Custom-made solutions based on diversity and experience

Berthold is unparalleled when it comes to developing custom-made solutions that exactly meet the requirements of your measurement task. Moreover, we offer even further benefits that are not listed in your specifications.

Highest measuring accuracy combined with lowest source activities and a great variety of communication standards make our measurement systems unique. In addition, our “Berthold modular system” includes both control room devices and compact devices.

Whatever measurement task you are facing – we can offer you the best solution.

- Unique and comprehensive range of „modular systems“
- Wide range of proven components
- Optimum system configuration by using different isotopes
- Highly sensitive detectors for lowest source activities
- Huge variety of communication standards and certificates
- More than 800 man-years of development experience
- Well over 20,000 Berthold systems operating worldwide

We are there for you! Worldwide.

Our sales engineers are looking forward to your request. Regardless of what you want to measure or where the measurement is taking place, we will provide you with the right system for each measurement task and we know how to configure it so that it perfectly suits your needs. From a wide variety of possible options, our application engineers will choose the right one for you.

With over 60 years of experience, a team of 350 employees worldwide and product innovations that set technical standards, we see ourselves as the experts for radiometric measurement solutions.

All our products are designed and manufactured in Germany. At Berthold, you will always get quality products “made in Germany”.

BERTHOLD TECHNOLOGIES’ perfect solutions from a single source.

Berthold Technologies’ engineers and service technicians are always there when you need them. Our global network of offices ensures fast and above all very competent assistance in case you need any. No matter where your production site is located, our qualified personnel will be with you in no time at all.

You can take our word for it.
