LB 147 / LB 148
Personal Contamination Monitors
Functions and accessories

Numerous service functions permit easily measurements for necessary periodical tests. This includes automatic calibration routines for all detectors and a fast system test. All inputs and outputs can be checked very quickly by means of further service functions.

A personal identification is possible by means of an optional card reader or transponder. Evaluation of personal data and acquisition of measured values in a database are carried out using the optional HFM program.

An optional signal tower is connected via USB or via a built-in relay. In addition it is possible to connect a door controller with configuration possibilities in the software, too.

A remote parameter program is available for configuration and documentation of the monitors. Besides the direct communication, the application can also be used offline to create or edit file settings.

Following interfaces are available: 5 USB (Host), 1 USB (Device), 1 Ethernet 10/100/1000 Mb, 1 RS232 und 1 RS485. The signal tower, transponder, magnetic card reader or printer (all optional) are connected to the USB interface.

Up to 10000 measuring data can be stored and transferred via USB or Ethernet to an external computer. As an alternative a serial port can be used. An extensive communication protocol permits the integration into a measurement network.

Reading measured data and performing software updates can be done very quickly via one of five USB (Host) ports.
Equipment concept

The Personal Contamination Monitors LB 147 and LB 148 are contamination monitors designed for use in the radiation protection field to detect contamination caused by alpha and beta/gamma radiation. Low-maintenance thin-layer ZnS (Ag) scintillators are used as detectors. The operation is via a touch panel on a graphical display.

Four automated guided hand detectors of LB 148 enable a simultaneously measurement of both palms and backs of hands. For LB 147 it is possible to activate an automatic request for back of hand measurement. LB 147 is also available as a narrow version (LB 147 Slim) with a changed positioning of the hand detectors. Additionally the LB 147 and LB 148 are also available as a Alpha Sense Version with special protection grid modifications for lower alpha detection limits. All versions have a removable hand probe for frisker measurements.

Each detector has its own calibration factor for each nuclide and its own spillover factor for each alpha nuclide. More than 50 nuclides with their calibration factors according to DIN ISO 7503-1 and A-100 are already deposited in the software.

By means of the scintillation technology it is possible to measure alpha and beta/gamma contaminations simultaneously but the devices can also be used as pure alpha or pure beta/gamma monitor. The results can be represented in the optional units Bq/cm² or cps. The detection limits of each measured value are calculated according to DIN ISO 11929 and stored together with the measurement values.

The background radiation is continuously monitored for each detector and used to compensate the measurement with the long-term average background value. Before the start of each measurement the background is checked for fluctuations, too.

A clear menu guidance provides a simple operation. The built-in power supply adjusts automatically to the various alternating voltage supplies.
## Technical Data

### LB 147 / LB 148

#### Detectors

- **A:** LB 147/LB 148  
  - Radiation detector: ZnS(Ag) Scintillator  
  - Material entrance window: 2 x 3 μm metallized plastic (0.4 mg/cm²)

- **B:** Alpha Sense  
  - ZnS(Ag) Scintillator  
  - Material entrance window: 2 x 3 μm metallized plastic (0.4 mg/cm²)

#### Hand Detectors

- **Dimensions entrance window:** 150 mm x 230 mm  
- **Sensitive area:** 345 cm²  
- **Background**:  
  - α-channel: about 0.1cps  
  - β-γ-channel: about 15cps

#### Foot Detectors

- **Dimensions entrance window:** 150 mm x 370 mm  
- **Sensitive area:** 555 cm²  
- **Background**:  
  - α-channel: about 0.2cps  
  - β-γ-channel: about 40cps

#### Ambiance

<table>
<thead>
<tr>
<th>Temperature range</th>
<th>-5°C to +40°C</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rel. humidity</td>
<td>0% to 90%, no condensation</td>
</tr>
</tbody>
</table>

### Electronics

- **CPU:** NXP i.MX 6 ARM Cortex-A9  
  - Windows Embedded Compact 2013
- **Display:** Coloured 7“ Touch Panel  
  - 800 x 480 Pixel
- **Ports:**  
  - 5 USB(Host), 1 USB(Device), 1 Ethernet 10/100/1000Mb, 1 RS 232, 1 RS 485
- **Power supply:** 3 relays max. 50 V, 5A  
  - 100 - 240 VAC wide-range input
- **Power consumption:** approx. 14.5 W, Fuse 2A

### Mechanical Data

#### Dimensions in cm

<table>
<thead>
<tr>
<th>LB 147 / Alpha Sense</th>
<th>LB 147 Slim</th>
<th>LB 148</th>
<th>LB 148 / Alpha Sense</th>
</tr>
</thead>
<tbody>
<tr>
<td>(W x H x D)</td>
<td>about 65 x 125 x 80</td>
<td>about 45 x 125 x 90</td>
<td>about 85 x 125 x 82</td>
</tr>
</tbody>
</table>

#### Weight

- LB 147 / Alpha Sense: approx. 35 kg  
- LB 148 / Alpha Sense: approx. 45 kg

### Accessories (optional) Ident. Nr.

- LB 147: 45356-10  
- LB 147 Slim: 45356-15  
- LB 147 Alpha Sense: 45356-16  
- LB 148 / Alpha Sense: 56542 / 56542-16  
- Mobile set (only f. LB 147): 52874  
- Transponder system (RFID): 66164  
- Chip / Card (RFID): 59495 / 59503  
- Magnetic card reader: 66442  
- Magnetic card: 34481  
- Signal tower f. LB 147 (red/green): 65252  
- Signal tower f. LB 148 (red/green): 65252  
- Calibration source: 29336 / 25509  
- HFM program: 42849-042  
- Stomach and thyroid probe*: 49950  
- Stomach probe*: 53516  
- Thyroid probe*: 53517  

* only for LB 147, only for export
